

7 Reasons Why to have window film installed... on your automobile.

1 Decrease Heat

Today's automotive film can provide up to 63%* solar energy rejection versus only 18% rejection for clear untreated automotive glass. A cooler interior provides more comfort and can significantly reduce air conditioning usage ultimately extending the life of AC systems and improving gas mileage.

*Films for buildings can protect up to 79%.

2 Reduce Fading

Causes of Fading
Source: IWFA

Window film blocks up to 99%* of UV rays while also significantly reducing heat. Reducing these two primary causes of fading helps to protect and extend the life of all of your vehicle's interior including seats, carpets, wood trim and dashboard.

*Our clear safety and security films block 98% or more of UV rays.

3 Diminish Health Risks

Exposure to UV rays from the sun is known to pose potential health risks for your eyes and skin. Window film provides an effective "suntan" for you against the harmful effects of the sun.

4 Cut Hazardous Glare

Glare from the sun or from headlights at night can blind your vision when on the road. This dangerous condition can be greatly improved by tinting your vehicle's side and rear windows.

5 Increase Safety & Security

Protective automotive films are made stronger and thicker to provide an extra level of safety in case of an accident, and security for your possessions against smash-and-grab type robberies.

6 Enhance Appearance

There's a variety of window film products to suit any type of car, truck or SUV. Choose from virtually invisible films to darker colors and shades to get the look you want.

7 It's Fast & Easy

Most vehicles can be tinted in 1 to 2 hours. Professional installation is quick and simple. Call your local Johnson Window Films dealer to find out more.
