Johnson Window Films publishes technical performance data for architectural window film specifiers.

Carson CA – May 16, 2013 – Johnson Window Films, Inc. has released 3-Part Specifications for their full line-up of high-performance flat glass solar control, protective and decorative films.

Johnson Window Films is expanding their influence through the release of new support materials for all flat glass window films. President Scott Davidson announced the news on May 16, 2013 with this statement, “We are pleased to present our technical specifications formatted to the Construction Specification Institute (CSI) MasterFormat™. Design professionals, architects, and interior designers use the CSI format to specify building materials in commercial building design and construction projects throughout North America. This standardized industry format will assist our dealers in delivering detailed product specifications and performance criteria needed to specify Johnson Window Films’ solar control, protective safety/security and decorative films for bidding consideration on flat glass projects.” Individual specifications are available for download at www.johnsonwindowfilms.com/dealer

For over 35 years, the Johnson Window Films name has been associated with quality, innovation and care. Made in the USA, Johnson delivers over 80 lines of solar control, protective, decorative and automotive window films. As a company we have grown in size, but have not outgrown our original philosophy: To provide quality film products that meet the highest standards in the industry.

Johnson Window Film products are manufactured by Johnson Laminating and Coating Inc., an ISO 9001:2008 certified company – BSI™ CERT# FM562721.
